

More \$\$ from pasture Multispecies forage

Photo: Jade Killoran.

Rising costs of fertiliser, fuel and feed cut into farm profits.

Multispecies forages are enabling southwest Victorian farmers to grow more feed on-farm at a low-cost.

As well as putting more money in your pocket, multispecies forage can fill a feed gap and slow grazing rotations to improve pasture persistence, soil health and the environment.

Basalt-to-Bay Landcare Network brings together multispecies forage experts to help you better understand how multispecies forage can benefit both your farm business and environment.

When: Wed. 6 April 2022

Time: 10:15am (for 10:30am start and 1:30pm finish). Lunch provided

Where: Basalt-to-Bay, Historic Railway Station, Bourke Ave, Koroit
(after lunch farm walk at Patons Road, Yangery).

Key presenters:

- Jade Killoran, Agronomist, Healthy Farming Systems, Multispecies forage specialist

Introduction to Multispecies Forage & Cover Crops

- Cath Lescun, Lead - Soils and Irrigation at Dairy Australia
& Helen Suter, Associate Professor of soil science, University of Melbourne

Pasture species diversity: implications for soil health and climate resilience

- Wayne Hansford, dairy farmer, experienced in multispecies forage
