

Effluent Management

Improving productivity, compliance and environmental outcomes.

Get a good understanding on how to make the most of nutrients in effluent to grow pasture. This is especially helpful now when urea prices are high and there is uncertainty about availability.

Representatives from the Environmental Protection Authority (EPA) will be at the workshop to talk through what an inspection involves. They'll cover what inspectors look for around effluent ponds and protecting waterways and will be available to answer any questions you have.

Whether you're reviewing your current system or planning for the future, this workshop will provide practical knowledge you can put into action. Stay up to date with the latest approaches to effluent management, system design, and environmental best practice.

Date and time Wednesday 29 April, 10:30am – 1:30pm

Location Koroit Senior Citizens Centre, 104 High St
